Cryptocurrency, sometimes called crypto-currency or crypto, is any form of currency that exists digitally or virtually and uses **cryptography** to secure transactions. Cryptocurrencies don't have a central issuing or regulating authority, instead using a decentralized system to record transactions and issue new units. [[Cryptocurrency is a **digital payment** system that doesn't rely on banks to verify transactions. It's a peer-to-peer system]] that can enable anyone anywhere to send and receive payments. Instead of being physical money carried around and exchanged in the real world, cryptocurrency payments exist purely as digital entries to an online database describing specific transactions. When you transfer cryptocurrency funds, the transactions are recorded in a public ledger. Cryptocurrency is stored in digital wallets.

Cryptocurrency received its name because it uses **encryption** to verify transactions. This means advanced coding is involved in storing and transmitting cryptocurrency data between wallets and to public ledgers. The aim of encryption is to provide security and safety. The first cryptocurrency was Bitcoin, which was founded in 2009 and remains the best known today. Much of the interest in cryptocurrencies is to trade for profit, with **speculators** at times driving prices skyward. There are thousands of cryptocurrencies. Some of the best known include: litecoin, Ripple, Ethereum...
